

### uvex gloves gives logistic workers better fit and dexterity

uvex have worked with a national logistics company to provide suitable hand protection for their employees. Their current hand protection was “too bulky” or “ill-fitting”.

#### The Problem

The Occupational Health and Safety (OHS) manager of a logistic company experienced difficulties with the fit and function of their current hand protection (general purpose safety gloves). Having the right feel when sorting the packages was one of the main concerns, being able to have a tight fit but still supply enough protection against minor scrapes and abrasions.

The OHS manager heard about the uvex product trial program, so he invited an uvex specialist to talk through some possible solutions.

#### The Trial + Solution

During the first meeting they established the issues and asses the existing hand protection solution. The uvex safety specialist determined the challenge around fit and dexterity. He quickly suggested trialling the uvex athletic lite. uvex provided an online trial evaluation to rate the performance of the gloves.

The uvex athletic lite “slim-fit” assembly gloves allow precision work with high levels of wearer comfort. The slim ergonomic fit allows the wearer to feel and grip workpieces very effectively. The fine-structured, open-pored

micro foam coating makes the gloves very breathable, which reduces excessive perspiration.

#### The Outcome and Feedback

After two weeks the uvex safety specialist met with the OHS manager to go through the results of the online trial evaluation. The outcome was a better grip and feel of the gloves. It was also more durable. The dexterity of the glove was extremely positive. After the trial was completed, uvex returned to the logistic company to help fully implement uvex safety hand protection. They spent time educating the team on how proper care and cleaning of gloves maximizes the safety and longevity of industrial hand protection. Working with customers, we have found that the donning and doffing techniques outlined here can increase the durability and longevity of work gloves.

#### uvex athletic lite

A class of its own

*Lightweight and dexterous safety glove for mechanical tasks*

#### Point of Difference

- High breathability thanks to open cell coating -reduces perspiration inside the safety glove
- Slim fit design for higher wearer comfort and unique ergonomic liner
- Grip: good in all working conditions
- Skin safe: Certified in accordance with OEKO-TEX Standard 100
